SSF Mini Project

Note: this is an optional project. It will not be graded. Please Slack or email me if you have any questions

You are to develop an application for travellers (post Covid travel frenzy) visiting a particular country. The application will provide all the necessary information about the country.

You are to write an application to allow a person to type the city name of a particular country, eg. Cairo, you application should return the following

- Weather at the destination city
  - https://openweathermap.org/current
- News general headlines
  - https://newsapi.org/docs/endpoints/top-headlines
- Currency exchange rate
  - https://exchangeratesapi.io/
- Points of interest
  - https://developers.amadeus.com/self-service/category/destination-content/api-doc/points-of-interest/api-reference
- Map of the city - use Google's static map
  - https://developers.google.com/maps/documentation/maps-static/overview

Feel free to design your application. Amadeus has lots of other interesting APIs like airport information, hotels, etc.

Try practising Bootstrap as well.

Happy Hacking.
